NOTICE

GCC reserves the right to modify the information contained in this user manual at any time without prior notice; un-authorized modification, copying distribution or display is prohibited. All comments, queries or suggestions concerning this manual please consult with your local dealer.
Important Information

Thanks for your purchase of GCC Expert Pro Cutting Plotter. For your safety and to optimize the performance of the Expert Pro, please read the user manual completely and keep it in a correct location.

PRECAUTIONS IN USE

- For safety concern, please always hold the cutter firmly from the bottom when moving it. Do not move the cutter by clasping the depression area on both sides.

- Do not shake or drop the blade holder, a blade tip may fly out.
- During operation, keep away from any moving parts of the cutter (such as the carriage, drums). Also be careful that your clothing and hairs do not be caught.
- Always connect the power cable to a grounded outlet.
- Always use the accessory power cable that is provided. Do not wire the power cable so that it becomes bent or caught between objects.
- Do not connect the power cable to branching outlet to which other machines are also connected, or use an extension cable. There is danger of overheating and of misoperation of the machine.
- Keep the tools away from children where they can reach.
- Always put the pinch rollers within position of the white marks.

Chapter 1 General Information

1.1 Introduction
Expert Pro series cutting plotters have been designed to produce computer-generated images on sheets or rolls of vinyl media.

This manual covers the following models of Expert Pro series cutting plotters:

<table>
<thead>
<tr>
<th>Model</th>
<th>Media Width</th>
</tr>
</thead>
<tbody>
<tr>
<td>EP-60</td>
<td>70mm (2.76&quot;) ~ 719mm (28.3&quot;)</td>
</tr>
<tr>
<td>EP-132S</td>
<td>70mm (2.76&quot;) ~ 1470mm (57.87&quot;)</td>
</tr>
</tbody>
</table>

1.2 Package Items
The package of the Expert Pro model contains the items listed below, please check carefully. If you find any item missing, please consult your local dealer for further assistance.

<table>
<thead>
<tr>
<th>Standard Item</th>
<th>Quantity</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Cutting Plotter</td>
<td>1</td>
</tr>
<tr>
<td>2. Stand Set (for EP-60)</td>
<td></td>
</tr>
<tr>
<td>• 1 Left side vertical stand</td>
<td></td>
</tr>
<tr>
<td>• 1 Right side vertical stand</td>
<td></td>
</tr>
<tr>
<td>• 1 Support for left side</td>
<td></td>
</tr>
<tr>
<td>• 1 Support for right side</td>
<td></td>
</tr>
<tr>
<td>• 1 Stand Beam</td>
<td></td>
</tr>
<tr>
<td>• 2 Bottom Stands with wheels</td>
<td></td>
</tr>
<tr>
<td>• 2 Sliding brackets for paper takeup</td>
<td></td>
</tr>
<tr>
<td>• 1 Hex Wrench (M5)Φ4</td>
<td></td>
</tr>
<tr>
<td>• 28 Socket flat head screws(M6*12L)</td>
<td></td>
</tr>
<tr>
<td>• 1 Installation Guide</td>
<td></td>
</tr>
<tr>
<td>2. Stand Set (for EP-132S)</td>
<td></td>
</tr>
<tr>
<td>• 2 piece of T-shape stand</td>
<td></td>
</tr>
<tr>
<td>• 1 piece of stand beam</td>
<td></td>
</tr>
<tr>
<td>• 18 pieces of M6 screws</td>
<td></td>
</tr>
<tr>
<td>• 1 piece of M5 L-shape hexagon screw driver</td>
<td></td>
</tr>
<tr>
<td>• 1 piece of Installation Guide for Stand Set</td>
<td></td>
</tr>
</tbody>
</table>
### 3. Flexible Media Support System Package

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1 set of Roll Media Flange (2 pieces)</td>
<td></td>
<td>V</td>
</tr>
<tr>
<td>1 set of Roll Holder (2 pieces)</td>
<td></td>
<td>V</td>
</tr>
<tr>
<td>1 set of Roll Holder Guide Bushes (4 pieces)</td>
<td></td>
<td>V</td>
</tr>
<tr>
<td>1 set of Roll Holder Support (2 pieces)</td>
<td></td>
<td>V</td>
</tr>
<tr>
<td>32 pieces of M6 screws</td>
<td></td>
<td>V</td>
</tr>
<tr>
<td>1 piece of M6 L-shape hexagon screw driver</td>
<td></td>
<td>V</td>
</tr>
<tr>
<td>1 piece of Roll Base</td>
<td></td>
<td>V</td>
</tr>
</tbody>
</table>

### 4. Accessories

- 1 piece of User’s Compact Disk
- 1 piece of AC power Cord
- 1 pieces of data cable (RS-232C)
- 1 pieces of data cable (Print cable)
- 1 pieces of data cable (USB cable)
- 1 set of Blade Holder Assembly (Installed in tool carriage of the cutting plotter)
- 1 piece of Blade (Installed in Blade Holder)
- 1 piece of Safe Blade
- 1 piece of Cutting Pad
- 1 piece of Tweezers
- 1 piece of Promise Card

### 1.3 Product Features

The following are the main features of the Expert Pro series cutting plotters:

- Tri-port connectivity provides you with greater flexibility.
- Up to 400-gram cutting force.
- Up to 600mm/per second cutting speed.
- Guaranty 5-meter tracking.
- User-friendly, multi-language control panel
1.4 Appearance of Expert Pro

1.4.1 The Front View (Figure 1-1)

**Tool Carriage**
performs the cutting with the installed blade or pen.

**Slicer Groove**
cuts off the extra media easily along this groove.

**Grid Drums**
move the media back and forth during operation.

**Control Panel**
14 buttons and 1 LED and 1 LCM showing messages and menus.

**Platen**
provides the surface for supporting media while cutting.

**Cutting Pad**
provides the protection of blade when the blade is cutting.

**Alignment Rulers**
media can be aligned with the clear guide line marks.

*Figure 1-1*
1.4.2 The Back View (Figure 1-2)

**Figure 1-2**

- **Pinch Rollers**: hold the media during cutting.
- **Lever**: raises or lowers the pinch rollers.

1.4.3 The Whole View (Figure 1-3)

**Figure 1-3**

- **Roll Holder**: holds and supplies the roll media for cutting.
- **T-Stand**: supports the cutting plotter
- **Roll Holder Support**: supports roll holders
- **Stand Beam**: stabilizes the body.
1.4.4 The Left-hand Side of Expert Pro (Figure 1-4)

![Diagram of the left-hand side of Expert Pro]

- **Power Switch** – On when switches to [I]; Off to [O]
- **Fuse** – 3 Amp.
- **AC Power Connector**

1.4.5 The Right-hand Side of Expert Pro (Figure 1-5)

![Diagram of the right-hand side of Expert Pro]

- **Serial Interface Connector (RS232C)**
  used to connect the cutting plotter to a computer through a serial interface cable.
- **Parallel Interface Connector**
  used to connect the cutting plotter to a computer through a parallel interface cable
- **USB Connector**
  used to connect the cutting plotter to a computer through a USB cable.
Chapter 2 Installation

2.1 Precaution

Notice 1

- Carefully handle the cutter to prevent any injuries.
- Make sure the power switch is off before installing the cutting plotter.

Notice 2 A proper place for installation the cutting plotter

Please select a proper location that meets the following conditions.

- The machine can be approached easily from any direction.
- Keep at least 60 cm space in front and behind the machine.
- Make sure the cutter is placed on a flat, level and sturdy surface.
- The operation temperature should be between 15 °C to 30 °C (60 °F ~ 86 °F) in the workshop.
- The relative humidity of the working environment should be between 25% to 75%.
- Protecting the machine from dust and air current.
- Preventing the machine from direct sunlight.

Notice 3 Connecting the Power Supply

Check the plug of the power cord to see if it matches the wall outlet. If not, please contact your dealer.

- Insert the plug (male) into a grounded power outlet.
- Insert the other end (female) of power cord into the AC connector of cutting plotter.
2.2 Stand & Flexible Media Support System

2.2.1 Stand Installation (for EP-60)
Please follow the procedures below for assembling the stand and the media support system.

Step 1: Please examine the supplied items in the accessory box of the stand carton before you install:

Item List:
- 1 Left side vertical stand
- 1 Right side vertical stand
- 1 Support for left side
- 1 Support for right side
- 1 Stand Beam
- 2 Bottom Stands with wheels
- 2 Sliding brackets for paper takeup
- 1 Hex Wrench (M5)Φ4
- 28 Socket flat head screws(M6*12L)
- 1 Installation Guide

Step 2: Position the Left side vertical stand perpendicularly to part ① and put the screws into the holes and tighten them to form a left side T-stand (Figure 2-1). Repeat the same steps with the Right side vertical stand.

![Figure 2-1](image-url)
Step 3
Place the stand beam upright on the T-stand and put the screws into the holes but do not tighten them at this step.

![Figure 2-2](image1)

Step 4
Position both the left Support and right Support perpendicularly to the T-stand and put the screws into the holes and tighten them as shown in Figure 2-3.

![Figure 2-3](image2)
Step 5
Remove the cutting plotter from the carton. Position the stand under the plotter, and insert the screws into the holes on the bottom of the plotter but do not tighten them up as shown in Figure 2-4.

![Figure 2-4](image)

Step 6
Tighten the screws of step 3 and step 5. Place the sliding brackets for paper takeup onto the stand beam.

![Figure 2-5](image)
### 2.2.2 Stand Installation (for EP-132S)

Please follow procedure below to assemble stand and media support system.

**Step 1** Please examine supplied items in the accessory box of stand carton before you install:

**Item List:**
- 2 piece of T-shape stand
- 1 piece of stand beam
- 18 pieces of M6 screws
- 1 piece of M5 L-shape hexagon screw driver
- 1 piece of Installation Guide for Stand Set

**Step 2**
- Remove the plotter body and the accessories from the shipped carton.
- Place the stand beam upright on the T-stand and follow the number \( 1 \) \( 2 \) to assemble.
(See Figure 2-6 & 2-7)

![Figure 2-6](image)

**Figure 2-6**

**Figure 2-7**

**Step 3**
Position the stand beam perpendicularly to part \( 1 \) and put the screws into the holes and tighten them as Figure 2-7. Then the complete picture of stand will be like Figure 2-6.
Step 4
Remove the cutting plotter from the carton. Position your stand under the plotter, and then insert the screws into the holes on plotter’s bottom and tighten them up as shown in Figure 2-8.
**Step 5**
Insert the roll holder support with the screws into the holes of the stand, and then tighten them up as shown in Figure 2-9. You could decide roll holder support’s position by inserting into different holes.

**Step 6**
Place two roll holders into the holes in the roll holder support. (Figure 2-10)
Step 7
Lastly, the complete picture will be shown like below. (Figure 2-11)
2.3 Blade Installation

! Caution
Do not touch the tip of the blade by your fingers.

! Notice
The blade is a consumable item, which will affect the cutting quality significantly. Please replace with a new blade when having the following situations:
1. The tip of blade is broken.
2. The cutting traces are not as good as they were.
3. Uncut area remains the same even the blade force has been raised significantly.

Figure 2-12 is the picture of the blade holder. Insert a blade into the bottom of the blade holder. Pushing the pin on the top of blade holder can remove the blade. Be sure to keep your fingers away from the blade tip.

Figure 2-12
1. Install Blade. (Figure 2-13)

![Figure 2-13](image)

2. Push the blade to the bottom of the blade holder. (Figure 2-14)

![Figure 2-14](image)

3. Adjust the blade tip to suitable length by rotating “Blade tip adjustment screw” clockwise or counterclockwise. (Figure 2-15)

![Figure 2-15](image)

**Tips:**

“The proper length” means the blade length is about 0.1mm more than film’s thickness. For example, if the thickness of film is 0.5mm, then the blade length is properly adjusted to 0.6mm and it can completely cut through the film layer without cutting though the paper backing.
4. Insert the blade holder into tool carriage. Please note the outward ring of the holder must put into the groove of carriage firmly (Figure 2-16) and lock the grip. (Figure 2-17)

![Figure 2-16](image1.jpg)  ![Figure 2-17](image2.jpg)

5. Reverse steps mentioned above to remove the blade holder.
6. Press the push-pin to remove the blade from the blade holder when replacing blade. (Figure 2-18)

![Figure 2-18](image3.jpg)
2.4 Cable Connections

Expert Pro communicates with a computer through **USB (Universal Serial Bus)**, **Parallel port (Centronics)** or **Serial port (RS-232C)**. This chapter shows you how to connect the cutting plotter to a host computer and how to set up the computer/cutting plotter interconnection.

!! **Notice:** When USB connection is enabled, both parallel port and serial port will be disabled automatically.

![Diagram showing USB, Parallel, and Serial ports](image)

**Figure 2-19**

2.4.1 USB Interface

Expert Pro build-in USB interface is based on the Universal Serial Bus Specifications Revision 1.1. (Operation system of Windows 95, Windows NT don’t support USB ).

- **USB driver installation**

  **Caution!!**

  ✓ If you are using Windows 2000 / XP / Vista / 7 as your operating system, make sure you log in using the “Administrator” account.

  Use the USB One-click Installation for quick driver installation. Follow the simple steps below for driver setup.
Step 1:  
Connecting your GCC cutter  
1. Connect the USB connector to the machine and then USB driver will installed automatically.

**NOTE**  
Check that the USB mode option under [ MISC ] → [ USB Printer Type ] menu is set to Common USB Mode before running the installation.

Step 2: Installing the software  
(1) Put the installation CD into your CD-ROM. Please make sure that the USB device is connected before you start the driver installation.

(2) Choose the model you want to install from the driver list and click on either the 32 bit or 64 bit driver installation depending on the operating system installed on your computer to start the installation.
NOTE
If you use the Windows 7 / Vista 64 bit program, please note that a pop-up window will be shown upon the initial installation as shown below:

Click “Yes” to continue.

(3) Click “Next”
(4) The installation will take a few minutes to complete and you will see a message below and click on “OK” upon completion. Enjoy your GCC cutter!

Note:
(1) If the driver is being installed for a second time, the user will be prompted as to whether a second copy of the driver installation is required.

(2) If the user selects yes, a second copy of the driver will be installed.
2.4.2 Parallel Interface

- Connecting to the Parallel (Centronics) Port

1. Connect a parallel cable to the cutting plotter and the host computer
2. Set up the output port LPT1 or LPT2 from your software package
3. Send the data to your cutting plotter directly. Or, use DOS commands like TYPE or PRINT to output data.

**Caution!! Please turn off the plotter before plugging the print cable.**

2.4.3 RS-232 Interface

- Connecting to the RS-232 (Serial) Port

1. For Personal Computer users, connect the RS-232C cable to the serial connector of the assigned serial port (COM1 or COM2) on your host computer.
2. Set up the communication parameters (Baud Rate and Data Bits/Parity) to match the setting of software package, refer to chapter 3 – “MISC” key description.

**Caution!! Please turn off the plotter before plugging the RS-232C cable.**

2.4.4 Data Transmitting

There are two options to transmit the data from the computer to the cutting plotter:

**Option 1**
With proper interface settings, the data can be transmitted from your application software package to the cutting plotters directly.

**Option 2**
Most cutting software packages are able to emulate HP-GL or HP-GL/2 commands, therefore, Use DOS commands like TYPE or PRINT to output your file. As long as the file is HP-GL or HP-GL/2 format, the cutting plotter can output the data precisely.
For example, a file with **PLT** extension generated by **SignPal** can be transmitted directly to the plotter at the DOS prompt, and then be cut out. Before outputting at the DOS prompt, set up a transmission protocol between your cutting plotter and computer by a DOS command, **MODE**. Make sure that your PC has the same communication protocol as the cutter. For example:

```
MODE COM2: 9600, N, 8, 1, P
```

Then, use **TYPE** command to output via **COM2** if **COM2** is the assigned output port.

```
TYPE  filename > COM2
```

**Tip:** Add the **MODE** command line to your system’s **AUTOEXEC.BAT** to automatically execute **MODE** command every time you want to output your data at the DOS prompt via serial connection. However, values in a **MODE** command should comply with the related requirements of your software. Refer to DOS manual for further information.
Chapter 3 The Control Panel

This chapter describes the button operations with the LCM menu flowcharts of Expert Pro. When the cutting plotter is ready for use as described in Chapter 1 & 2, all functions are under default parameters.

3.1 The LCD Panel

<table>

</table>

--- Media sizing ---

--- POWER ---

To indicate the power status.

### [ Arrow Keys ]

1. To move the tool carriage position on X or Y axis.
2. To select functions or change values of settings.

### [ ENTER ]

1. The displayed parameters will be saved automatically.
2. To set a new origin at the present tool carriage position.
   - In “offline” mode, moving the tool carriage to desired position by [Arrow Keys], then press [ENTER] key to set a new origin. While moving with the parameters of XY-axes displayed, press [MISC] key will enable fine-tune movement; press [MISC] key again to disable the function.

### [ PAUSE/RESUME ]

To temporarily halt the cutting process.
To resume the process by press [Pause/Resume] key again.

### [ ONLINE/OFFLINE ]

1. To switch between online mode and offline mode.
2. To stop the cutting job or abort the change of setting.
   - Once press this key, the cutting job will be terminated immediately and cannot be resumed.

### [ OFFSET ]

To set or modify the distance between the blade tip and the center axis.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.000~1.000mm</td>
<td>0.275mm</td>
</tr>
</tbody>
</table>

### [ FORCE ]

To set or modify the value of tool force.

<table>
<thead>
<tr>
<th>Setting</th>

</table>
| Set Communication | To build up the communication between host computer and cutter.  
  Baud Rate is to determine the speed of data transmission.  
  Data Bits refers to the size of one block of data.  
  Parity is used to check if data was revived correctly or not.                                     |                  |
|                | 9600, n, 7, 1, p  9600pbs, 7 Bits with NO Parity  
  9600, o, 7, 1, p  9600pbs, 7 Bits with ODD Parity  
  9600, e, 7, 1, p  9600pbs, 7 Bits with EVEN Parity  
  9600, n, 8, 1, p  9600pbs, 8 Bits with NO Parity  
  9600, o, 8, 1, p  9600pbs, 8 Bits with ODD Parity  
  9600, e, 8, 1, p  9600pbs, 8 Bits with EVEN Parity  
  19200, n, 7, 1, p  19200pbs, 7 Bits with NO Parity  
  19200, o, 7, 1, p  19200pbs, 7 Bits with ODD Parity  
  19200, e, 7, 1, p  19200pbs, 7 Bits with EVEN Parity  
  19200, n, 8, 1, p  19200pbs, 8 Bits with NO Parity  
  19200, o, 8, 1, p  19200pbs, 8 Bits with ODD Parity  
  19200, e, 8, 1, p  19200pbs, 8 Bits with EVEN Parity |                  |
| Firmware Version | To display the version number of Firmware and FPGA code.                                                                                                                                                     |                  |
| Select Language | To select displayed languages on LCM panel in English, Spanish, Italian, Deutsch, Japanese, Portuguese, Polish, Turkish or French.                                                                       | English          |
| Select Units    | Provide two-unit systems for users convenient.                                                                                                                                                                | cm/gram;         |
| Scale Length    | To adjust the scale of media length and width that may cause by the thickness of the media. The Denominator is the actual length, and the Numerator is the ideal length measured from the resultant.                   |                  |
| Scale Width     | For example, cutting a line with 500.0 mm length. The procedure as follows:  1. Press the [LEFT ARROW] to choose the Numerator and select 500.0 mm,  
  2. Cut the length by sending a graph file,  
  3. Measure the length then use the [RIGHT ARROW] key to choose the Denominator, then  
  4. Press [UP ARROW /DOWN ARROW] to change the values of the actual length.                                                                       |                  |
| USB Printer Type | To select USB Mode from the LCM panel. Two USB modes are available: GCC USB Mode and Common USB Mode.                                                                                                        | Common USB Mode  |
|                | GCC USB Mode: Only for 32 bit driver  
  [Windows XP/2000/7/Vista]  
  Common USB Mode: Both for 32 bit & 64 bit driver  
  [Windows XP/7/Vista] |                  |
Chapter 4 Operation

4.1 Media Loading

4.1.1 Loading the Sheet Media
To load the media properly, please follow the procedures listed below:

Pull the lever upward to raise the pinch rollers. (Figure 4-1)

Load your media on the platen and slide it under the pinch rollers from either the front side or the backside. The alignment rulers on the platen extension will help you to adjust the media precisely.

Note:
Be sure that the media must be covered by the paper sensors on the platen when loading the media. At least one of the two paper sensors should be covered. Once the media covers the sensor, the cutting plotter will size width and length of media automatically.

Then move the pinch rollers manually to the proper position. Be sure the pinch rollers must be positioned above the grid drum. The white marks on top trail will help you position pinch rollers when media on the platen. (Figure 4-2)
Push the lever downward to lower down the pinch rollers.

Turn on the power; the machine will be initialized. Then follow the instruction of LCM to measure the size of the media.

**Note:**
Move the pinch roller by applying force at the rear portion of the pinch roller support. Do not move it by holding its front rubber roller.
4.1.2  Loading the Roll Media

Firstly, put the roll media guide bushes on two roll holders. (Figure 4-4)

![Roll media guide bushes](Figure 4-4)

**Option A**
Insert the two roll holders into the roll media support set, and then place the roll media directly between the two roll holders. (Figure 4-5)

![Figure 4-5]
Option B (Use the media flange)

1. Insert a roll media flange at the end of each roll media and tighten the thumbscrew until the roll media is firmly gripped. (Figure 4-6)

![Figure 4-6](image)

2. Then put the roll media on the roll holders. Adjust the position of the roll media ensure that the media flange is able to run in the groove of media guide bushes. (Figure 4-7)

![Figure 4-7](image)

(The Puma model is used in the pictures for illustration.)
3. Loading the media on the platen. After loading the roll media, flatten the media on the platen and hold the front edge of the roll media firmly. (Figure 4-8)

![Figure 4-8](image)

4. Then turn the roll downward to make an equal tension across the media. (Figure 4-9)

![Figure 4-9](image)

5. Move the pinch rollers to the precise location and be careful that the pinch rollers must be positioned above the grid drums.
6. Push the lever downward to lower down the pinch rollers.
7. Fixes roll media guide bushes on the roll holder to secure the roll media.
8. Turn on the power switch, and the tool carriage will size the media automatically. Then the cutting plotter is ready to work.
9. Unloading media: Reversing steps mentioned above to remove the media.

For the users of Expert Pro-60, you can also use the “Roll Base” (a standard accessory of Expert Pro-60) to feed a roll media. Please adjust the position of roll base to get a good cutting result. (Figure 4-10)

### 4.2 Tracking Performance

In order to achieve the best tracking performance for a long plot, please leave the margin of 0.5mm~25mm in the left and right edges of the media. (Figure 4-11)
4.3 Cutting Force and Offset Adjustment

Before sending your designs from computer to Expert Pro for cutting, please make “Cut Test” to adjust cutting force and offset value.

The “Cut Test” should be repeated several times until the optimum settings are achieved.

Please follow procedure below to optimum the cutting force and offset settings.

Step 1.
After sizing the media, press [CUT TEST] button to select the “Square Cut”, and press [ENTER KEY] to confirm.

The default cutting force and offset value of the cutting test are 80gf and 0.275mm respectively.

Step 2.
Press [ARROW KEY] to move the tool carriage to the position where you would like to cut. Then, press the [ENTER KEY] to make a “Cut Test”.

Note: At the same time, the new origin is also set at the cut test position.

Step 3.
When the “Cut Test” is completed, a pattern appears (please refer to Figure 4-12). Peel off the pattern to see if it can be easily separated from the media base. If the output result is good, the cutting force is set appropriately. If not or it cut through the back paper of media, press [FORCE KEY] to adjust the tool force until an optimum force is obtained.

Step 4.
If the pattern appears to be BB or CC layout (see Figure 4-12), press [OFFSET KEY] to adjust the offset value until AA pattern is shown.
Square Cut
Select: OK: Enter

Press ENTER_KEY

Move cut test
M: Y:

Press ENTER_KEY

AA
BB
CC

Continuous Square Cut
N: CANCEL
OK: Enter

Press ENTER_KEY

Finish square cut
Press ENTER_KEY

Press SPEED_KEY, FORCE_KEY, OFFSET_KEY to setup or
Press arrow keys to desired position for next square cut

Figure 4-12
4.4    When Completing the Cutting Job

After completing the cutting job, raise the sheet-loading lever, and then remove the material. You can also cut off the finished job by the Safe Blade (a standard accessory) along the knife guide. (Figure 4-13)

Figure 4-13
Chapter 5 Basic Maintenance

This chapter explains the basic maintenance (i.e. cleaning the cutting plotter) required for the cutting plotter. Except for the below mentioned, all other maintenance must be performed by a qualified service technician.

5.1 Cleaning the Cutting Plotter

In order to keep the cutting plotter under good condition and best performance, you need to clean the machine properly and regularly.

Precaution in Cleaning

✧ Unplug the cutting plotter before cleaning
✧ Never use solvents, abrasive cleaners or strong detergents for cleaning. They may damage the surface of the cutting plotter and the moving parts.

Recommended Methods

✧ Gently wipe the cutting plotter surface with a lint-free cloth. If necessary, clean with a damp cloth or an alcohol-immersed cloth. Wipe with water to rinse off any residue and dry with a soft, lint-free cloth.
✧ Wipe all dust and dirt from the tool carriage rails.
✧ Use a vacuum cleaner to empty any accumulated dirt and media residue beneath the pinch roller housing.
✧ Clean the platen, paper sensors and pinch rollers with a damp cloth or an alcohol-immersed cloth, and dry with a soft, lint-free cloth.
✧ Wipe dust and dirt from the stand.
5.2 Cleaning the Grid Drum

- Turn off the cutting plotter, and move the tool carriage away from the area needed to be cleaned.
- Raise the pinch rollers and move them away from the grid drum for cleaning.
- Use a bristle brush (a toothbrush is acceptable) to remove dust from the drum surface. Rotate the drum manually while cleaning. Refer to Figure 6-1

![Figure 6-1](image)

5.3 Cleaning the Pinch Rollers

If the pinch rollers need a thorough cleaning, use a lint-free cloth or cotton swab to wipe away the accumulated dust from the rubber portion of the pinch rollers. To prevent the pinch rollers from rotating while cleaning, use finger to hold the pinch rollers not to rotate.

If needed to remove the embedded or persistent dust, use the lint-free cloth or cotton swab moistened with rubbing alcohol.

**Note:** The daily maintenance of your cutting plotter is very important. Be sure to clean up the grid drum and pinch rollers regularly for better cutting accuracy and output quality.
Chapter 6 Trouble Shooting

This chapter is to help you correct some common problems you may come across. Prior to getting into the details of this chapter, please be sure that your application environment is compatible with the cutting plotter.

Note:
Before having your cutting plotter serviced, please make sure that the malfunction is in your cutting plotter, not the result of an interface problem or a malfunction in your computer or a software problem.

Why is the cutting plotter not functioning?

Possible Causes:

6.1 Non-Operational Problems
Check the following first:
- Does the AC power cord plug in properly?
- Does the AC power cord connected to the power connector properly?
- Does the power LED still illuminate?

Solutions:

If the LCM is able to display the message, the cutting plotter should be in a normal condition. Switch off the cutting plotter and turn it on again to see if the problem still existing.

If the LCM is not able to display any message, contact the technician from your dealer.
6.2 Operational Problems

Some mechanical problems or failure during operation will cause some problems. The error messages shown on the LCM present the problem first, and followed by recommended actions. If the problem still exists after the recommended actions have been done, have your cutting plotter serviced.

**Error, Check Media Or Drum or X Motor**

This message indicates that there might be a problem on the \textbf{X axis}. Check if the drum is working well and if the media is well loaded. Correct the problem and re-power on to reboot system.

**Error, Check Media Or Y Motor**

This message indicates that there might be an obstruction to carriage relating to a problem on the \textbf{Y axis}. Correct the problem and re-power on to reboot system.

**Error, Check Carriage Sensor or VC Motor**

This message indicates that the blade up/down sensor malfunction. Re-power on to re-boot system. If the problem still exists, find a serviceman.

**Graph Was Clipped. Data In Buffer**

This message indicates that the cutting exceeds the cutting limit. Reload larger media or re-scale the plot to a smaller size; then press the key followed by the display of LCM to continue.
6.3 Cutting Plotter/Computer Communication Problems

The messages showed below present problems in relation to cutting plotter/computer communication.

<table>
<thead>
<tr>
<th>Communication Error</th>
<th>Is the connection cable connected to the cutting plotter and computer properly?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Setup: <strong>MISC. key</strong></td>
<td><strong>Yes</strong></td>
</tr>
<tr>
<td></td>
<td><strong>No</strong></td>
</tr>
</tbody>
</table>

- **Yes**
  - Has the interface setting been done correctly?
  - **Yes**
    - Try the communication between your cutting plotter and computer. If it still does not work, have your cutting plotter serviced.
  - **No**
    - Refer to Chapter 2 - Connecting your cutting plotter.

- **No**
  - Refer to the “**MISC**” key in Chapter 3 - Description of Operation for the port setup.

**Note:**
The computer also needs to set up compatible communication parameters to the cutting plotter set up.

<table>
<thead>
<tr>
<th>HP-GL/2 Cmd. Error</th>
</tr>
</thead>
</table>

If your cutting plotter cannot recognize the HP-GL/2 or HP-GL commands, please check the HP-GL/2 or HP-GL commands applied to your cutting plotter are used properly.
### 6.4 Software Problems

Check the following first:

Does your software package indicate that it will work with your computer and cutting plotter?

<table>
<thead>
<tr>
<th>No</th>
<th>Yes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does your software support HP-GL and HP-GL/2 drivers? (* check the configuration settings of your software.)</td>
<td>No</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does the cutting plotter interface match the requirements of your software?</td>
<td>No</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does your software recommend using a different cable?</td>
<td>No</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>Try using the recommended cable.</td>
<td>No</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>Re-power on the cutting plotter and try to send the file again.</td>
<td>No</td>
</tr>
</tbody>
</table>

| Most well known cutting softwares in the world have drivers for our cutting plotters. If not, use software that has HP-GL and HP-GL/2 emulation supports and you can chose the following three drivers: |
|---|---|
| A3 size: HP7475A |
| A1 size: HP7580A |
| A0 size: HP Draf Pro Exl or HP Draf Master |

<table>
<thead>
<tr>
<th>Refer to Chapter 2 - Connecting your cutting plotter.</th>
<th>Does the software vendor provide a sample file?</th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>Yes</td>
</tr>
</tbody>
</table>

| Do something about the error message display on LCM, or consult your software vendor. |

<table>
<thead>
<tr>
<th>No</th>
<th>Yes</th>
</tr>
</thead>
</table>
6.5 Cutting Quality Problems

**Note:** The daily maintenance of your cutting plotter is very important. Be sure to clean up the grid drum and pinch rollers regularly for better cutting accuracy and output quality.

Is the blade installed correctly and the blade holder fastened securely?

- **Yes**
  - Is the blade dull or chipped?
    - **Yes**
      - Replace with a new blade
    - **No**
      - Is tool force set up properly? (The default for tool force is 80 gf)
        - **Yes**
          - Adjust the tool offset to obtain an optimum value.
        - **No**
          - Adjust the tool force to obtain an optimum blade force. Refer to Chapter 4.3 “Cutting Force and Offset Adjustment”

- **No**
  - Refer to Chapter 2.3 “Blade Installation”

Is there any dirt adhered to the blade?

- **Yes**
  - Remove the blade and clean it.
- **No**
  - Please contact your dealer for technician support.

About the Tool

Frequently used terms related to the cutting blade and the plotting pen.

OFFSET is the distance that the blade tip is displaced from the centerline of the blade.

\[ \text{Length of protrusion} = t_1 + \frac{t_2}{2} \]

But for your convenience you may just make it about 0.3mm ~ 0.5mm beyond the blade holder tip.
CorelDRAW Output Instruction

The following is an example of how to output the file with CorelDRAW.

User Instructions

1. Open CorelDRAW, finish editing all the files you wish to plot and select all the images at once.

2. Select “Outline Pen” to adjust the outline for cutting.

3. Adjust the value of pen width to 0.001 mm and click “OK” to save your input.
4. Select “File → Print” to output the file to your cutters.

5. Choose the correct model you have installed.
6. Choose the “Layout page” and click the “Reposition images to: → Bottom left corner”. Please note that you must put your image at the bottom left corner.

7. Go back to the General page and check that your image is at the bottom left corner. Click “Print” and get a wonderful cutting image.
